

# ABOUT GT-E

GT-e is a new rigid endoscopic surgical system which is compact with three devices in one. It is battery powered and it transmits the image from inside the human body to the display directly via the Wi-Fi system without the need for the camera unit and cable. GT-e system has 6 cold white LED lights attached in the front and no need for the light source unit and cable. The GT-e system has High resolution with full HD and auto focus. GT-e is very light and easy to use. GT-e has multiple types of devices depending on the work area in the body and the body size:

- Abdominal area for gynecological and general surgery - The uterine area for hysteroscopy and biopsy - Knee area - Urinary system area - Bronchial area - The pharyngeal area for endotracheal intubation in anesthesia

# OUR CONTACT
